MINPRO

MINERAL PROCESSING TECHNIQUES FOR UNLOCKING PRIMARY LOW GRADE COMPLEX ORES VALUE

SPECIFIC CHALLENGE

European raw materials reserves are becoming more complex, lower grade and their mineralogical composition is likely to vary with time. Hence, innovating processing and refining technologies have a key role in boosting the recovery of valuable minerals while minimising processing costs. This matchmaking event aims at discussing current and emerging challenges faced by European mineral processing industries around three major topics.

SCOPE OF TOPICS

Innovative equipment

The beneficiation of low grade deposits requires processing of huge amounts of rock. Beyond high performance requirements, such energy consuming processes are a challenge in terms of energy management. The topic "Innovative equipment" will cover advances in new comminution and separation processes development.

Process modelling

Low grade and complex ore mining is a near-future perspective for a large number of operations with ore feed grade and mineralogy varying along time. The main challenge nowadays is to achieve valuable mineral liberation and separation while limiting energy consuming processing steps. This topic aims at presenting mineralogical characterization as a key controlling parameter for process simulation in the aim of unlocking strategic metals and new deposits.

Hydrometallurgy

Present challenge is to develop adaptive processes enabling valuable metal extraction from deposits with poor mineralogical continuity. Unlike pyrometallurgy, hydrometallurgy represents a real benefit to low grade and varying ore treatment. Its limited environmental impact and controlled by-product generation help implementation of this process in sensitive environment.

CONFERENCE AGENDA

12:00 Networking lunch Opening plenary ceremony: MinPro challenges L. Filippov (GeoRessources-Université de Lorraine) INNOVATIVE EQUIPMENT 13:15 Ultra-fine grinding versus energy costs U. Peuker (Freiberg University) 13:35 Case study: High-voltage pulses treatment for low-grade skarn ore comminution K. Bru (BRGM) 13:45 Discussion Enhanced fine and coarse particles flotation performance D. Fornasiero (University of South Australia) 14:20 Case study: Process improvement in ArcelorMittal's Bosnia operation M. Gotelip (ArcelorMittal) 14:20 PROCESS MODELLING 14:50 Automated mineralogy for process modeling and refinement of processing results T. Wallmach (Eramet) 15:10 Case study: Geometallurgical approach for economic evaluation Q. Dehaine (University of Exeter - Université de Lorraine) 15:20 Discussion HYDROMETALLURGY 15:30 Tools for hydrometallurgical processes modelling S. Bourg (CEA) Case study: Contribution of circuit configuration modelling in increasing a solvent plant capacity J. Thiry (Areva) Discussion Afternoon tea Wrap-up & Networking Evening reception Brasserie Flo Excelsior Wednesday, 7th of June 8:30 Registration Project pitches (5' by participant) Morning tea Match-making Wrap-up and closure ceremony P. Mutzenhardt, President and F. Villiérsa, Vice-President (Université de Lorraine)	Tuesday, 6th of June	
13:00 Opening plenary ceremony: MinPro challenges L. Filippov (GeoRessources-Université de Lorraine)	11:00	Registration
Innovative Equipment Innovative Equipment Innovative Equipment Ultra-fine grinding versus energy costs U.
